2. Authorization for this examiner's amendment was given in a telephone interview with Kin-Wah Tong (Reg. No. 39,400) on 06/23/2010.

The application has been amended as follows:

42. (Currently Amended) A non-transitory computer-readable medium encoded with computer executable instructions that when executed cause a computer system to perform call connection services between user devices using a decomposed border element, made up of a border element signaling entity and a plurality of border element media entities, between the user devices and the computer system, by performing:
 - connecting a first user device to a first border element media entity and to the border element signaling entity;
 - receiving in the border element_signaling entity a signaling message from the first user device to setup a call;
 - communicating the signaling message from the border element signaling entity to

a call control element that manages a call flow process and determines a path to a destination user device and a second border element media entity associated with the destination user device;

opening pinholes for media streams;

connecting the first border element media entity to the second border element media entity for media transfers;

communicating between the call control element and the second border element media entity to determine if transcoding is required and if it is invoking the appropriate border element media entity to provide the transcoding; and

establishing a call connection between the first user device and the destination user device.

43. (Currently Amended) The non-transitory computer-readable medium of claim 42 wherein the call connection is terminated, by further performing:

communicating between the call control element and the first and second border element signaling entities when one of: the first user device and the destination device indicates it is ending the call; and

communicating a call termination from the call control element to the first and the second border element media entities to close the pinholes.

44. (Currently Amended) The non-transitory computer-readable medium of claim 42 wherein the call control element further performs:

communicating with a service broker to determine whether a service feature is required;

communicating with an application server to service the call; and

communicating with a media server to provide media stream functions when required.
